Aiims-like institute for animals in Delhi on cards

AllVS would be a centre for national importance in veterinary sciences and research

SANJEEB MUKHERJEE

New Delhi, 8 Septembe

n a major development, the Centre, for the first time, has initiated a draft proposal for setting up an All India Institute of Medical Sciences (Aiims)-like institute of national importance for animal health, education and research in Delhi to be called the All India Institute of Veterinary Sciences (AIIVS).

The institute will also have a 200-500 seater ultra-modern super specialty hospital attached to it for providing outpatient and in-patient medical facilities to animals.

According to the draft proposal, the premier institute would also be equipped with advanced diagnostic and teaching facilities for under-graduate veterinarians. It would have innovation and research facilities for post-graduate and Phd scholars under one single roof.

Land for the institute is being searched for around the National Capital Region (NCR). Just like Aiims, AIIVS would also be an apex veterinary referral hospital in India. The hospital will have departments for the treatment of companion animals, farm animals, equines, wildlife and exotic pets.

The hospital will have hi-tech departments in surgery, ophthalmology, orthopedics, anesthesia, soft-tissue culture, neuter-surgery, oncology and cardiology, among others.

AIIVS will also act as a think-tank for policy research and advocacy.

It would be a centre of excellence for animal pandemic preparedness with the 'One Health Approach' of the World Health Organization (WHO).

Sources said the draft proposal for the AIIVS has been mooted by the Veterinary Council of India (VCI). It would now be placed for formal approval before the Union Cabinet, after which its total cost, funding and other requirements would be

The VCI is a statutory body established under the Indian Veterinary Council Act 1984. It functions under the supervision of the ministry of animal husbandry, dairving and fisheries.

KEEPING A STOCK

*According to 20th livestock census of 2019 **In last five years ending 2019-20 ***According to Economic Survey of 2021–22 #As in 2021 Source: Official document

If approved, sources said the hospital may start functioning in the next threefour years, though in phases.

Once the AIIVS starts functioning, the concept could be expanded to other parts of the country, similar to AIIMS, sources said. The draft proposal said the Union minister for animal husbandry, dairying and fisheries will be the ex-officio president of the governing board of AIIVS, while the secretary in the ministry will be the secretary of the board.

In AIIMS, the Union health minister is ex-officio head of the governing board.

The draft proposal also said that the governing board will comprise Union animal husbandry commissioner, president of the VCI and five vice-chairmen of veterinary universities and director of the national institutes.

AIIVS will add to the existing veterinary research efforts and teaching targets of the state veterinary universities and national-level institutes such as the Indian Veterinary Research Institute (IVRI) and National Dairy Research Institute (NDRI), Karnal.

"The institute is envisaged to meet the requirements of preventive, promotive and curative primary as well as secondary and tertiary animal health issues. It will produce top-notch veterinary practitioners and teachers for the country," the draft said.

In the first phase, around 200 students will be admitted to the premier institute on the basis of NEET and NTA merit.

AIIVS will have four major buildings within its premises.

The first would be the super specialty hospital, followed by the academic block. Then, there would be the research block and finally the administrative and supportive facility.

The research block will house various centres for advanced studies like artificial intelligence and machine learning in veterinary medicine and stem cell therapy, among others.

Some sources said work on the concept of AIIVS came into picture when after several attempts, veterinary science and education couldn't be separated from agriculture research despite creation of a separate ministry of animal husbandry

Rethinking India's past

& IDEAS

The story of India is complicated and messy; its civilisational history stretches across a cavernous and labyrinthine $land scape \, and \,$ stumbles through an assorted mix of cultures that are as different from each

other as light from dark. The people who claimed this land as their own have created a medley of genetic and cultural groups and their story, like the rivers that drew them to the region in the early days of human settlement, flows from countless sources and carries the imprint of multiple influences.

How and where does one begin to understand this history?

In the 100-odd essays in The Indians: Histories of a Civilisation, experts across disciplines pick their way through this question. Historians, geologists, political scientists, linguists and a host of writers from various disciplines open up the past, using the multiple tools at their disposal in remarkably innovative ways. Be it reports and data on climate change, geological and genetic evidence, migration studies, linguistic research or archival material about India's colonial $history, the\,ess a y ists\,in\,the\,book\,walk$ the serpentine pathways of the past in their search for credible answers.

The collection of essays has been edited by Ganesh Devy, Tony Joseph and Ravi Korisettar. Devy, whose work with the denotified tribes of India and the largest-ever survey of languages in history is well known, embarked on this project because he was horrified at the polarisation of all debates on India's past and the hatred spewed against its traditions of diversity and religious pluralism. He writes in the introductory essay that this book was written to combat the misinformation that has been seeded into present-day discussions about India's past.

For Devv and his fellow editors, the inability to engage critically with the past is spreading an epidemic of disinformation. And it has reduced what is an otherwise rich, layered narrative of the people of the region into a unidimensional account that parcels the ancient world into neat binaries of race. superiority and patriotism. The book was born out of a contestation, Devy writes, between the scientific view of history and the ideologically charged attempts to distort the history of South

Asia. It is important, under such conditions, to present a meaningful counter narrative.

One such essay in the book is by the late Rajesh Kochhar, an astrophysicist who has worked extensively on the Vedic civilisation on the river Sarasvati. He traces the various possible routes that the river could have taken in the ancient world and, using diverse sources, drills down to the potential geographical terrain it once inhabited. Kochhar's remarkable eye for detail and ability to make measured arguments, without ridiculing those who may disagree with him, is a lesson on how such studies should be carried out.

The essay by Tony Joseph on migratory patterns is another fascinating read. It takes readers beyond the usual, reductive arguments about

invaders and original residents and helps understand what the author terms "the metaphor of the Indian demographic pizza". Free from the usual jargon, it sets out the arguments simply, without exaggeration or sensationalism. The book also

highlights many biases that mar research on the region's political and cultural past. For example, an essay by urban historian Naravani Gupta challenges the way in which historians and archaeologists have explored the idea of cities. Unlike the Greek polis or city, there is very little understanding about urban settlements in this corner of the world.

The oversight could be deliberate or because archaeologists have been more focused on fieldwork than textual research in this region, or both. Gupta points out that evidence for the "city" is scattered in multiple primary and secondary narratives. From the grama of the Vedas to the *nagara* that Panini wrote about and the raidhanis of later literature, there is a lot that scholars of urbanisation can draw upon in their studies of the region.

Other essays offer a fresh twist to familiar arguments. The idea that climate change was responsible for the rise and fall of civilisations in this region for instance, may be an old one. But the essays on the subject — one on climate variables by bio archaeologist Gwen

Robbins Schug and another on weather patterns, by genetic archaeologist Sridhar Vajapey — add perspective to knowledge about the inherent fragility

of human existence. The well-known historian Vinay Lal, in the afterword to the book, writes about the politics of history in India and how we are close to demolishing the civilisational ethos that has been developed over thousands of years. The idea of the nation-state, Lal writes, "has been the most potent of poisons that Europe has shared with the world, not least of all India". He argues that the nation-state abhors diversity. It has always been birthed in violence, by forcibly suppressing or alienating people opposed to the idea of being defined by a single language, religion, or colour.

When the past is held ransom to the

ideological principles of one political party, or stowed away inside the box of patriotism and national interest, it destroys the essence of being Indian. Lal's essays demonstrate the power that well-researched and energetically argued ideas can wield in a world that has developed a growing distaste for complexity.

Not all essays hit the perfect pitch. Some fail to convert the novelty of the ideas being explored into a cogently argued piece of writing and some get tangled in the circuitous wheels of their own reasoning. The book would have also benefited from a more diligent language editor.

Names have been misspelt and there is no consistency in the spelling used for common words — one word is spelt in four different ways within the span of a page. Also, the formal academic style employed by some essayists needed rewriting. The multiplicity of voices also seems cacophonous at times.

G.N. DEVY TONY JOSEPH RAVI KORISETTAR

THE INDIANS: HISTORIES OF A CIVILISATION

Joseph, Ravi Korisettar

Publisher:

Aleph

Pages: 619 Price: ₹1,299

This does not take away from the monumental effort that the team that conceptualised the book has undertaken. Apart from providing readers with an abundance of ideas, they have helped recreate the experience of ancient town squares, where debate and dissent were used to further arguments and not as reasons for incarceration. Even if the book establishes the importance of such spaces, it would have served its purpose.

Indian Air Force endorses the indigenous basic trainer aircraft

AJAI SHUKLA New Delhi, 8 September

Indicating satisfactory progress on one of the Indian aviation industry's flagship projects, the air marshal in charge of Indian Air Force (IAF) procurement personally flew, and endorsed, the new basic trainer aircraft (BTA) that Hindustan Aeronautics Ltd (HAL) has designed for training rookie pilots of the

Called the Hindustan Turbo Trainer Aircraft - 40 (HTT-40), the trainer was flown on Friday in Bengaluru by the deputy chief of air staff (DCAS), Air Marshal Ashutosh Dixit.

The HTT-40, which has been indigenously designed and developed by the Aircraft Research & Design Centre of HAL, is based on the training requirements of the IAF.

The IAF had initially insisted on training its greenhorn pilots, and those of the other services, on a trainer imported from Switzerland -- the Pilatus PC-7 Mark II. But HAL insisted on developing the HTT-40 as an "Aatmanirbhar Bharat" (self-reliant India) product. The Ministry of Defence (MoD) backed the project, which is now coming to fruit-

at about ₹50 crore per aircraft, which is about the same as the cost of the Swiss

trainer. However, the high degree of indigenisation in the Indian trainer will allow it to be modified into variants such as a light attack aircraft, without enduser clauses from original equipment manufacturers (OEMs) overseas.

Control of the intellectual property rights of the HTT-40's sub-systems and systems will also make it easier to export it to regional countries for use by their trainee pilots. The HTT-40 is a fully aerobatic air-

craft, powered by a four bladed turboprop engine. It is fitted with a state-ofthe-art glass cockpit, modern avionics and latest safety features, including a zero-zero ejection seat. The trainer has a maximum speed of 450 kilometres per hour and a maximum service ceiling of six kilometres," said the MoD in a media statement on Friday.

The HTT-40 first flew on May 31, 2016, and obtained system-level certification on June 6 last year.

Clearance by India's regulator for military aviation products, the Centre Military Airworthiness and for Certification, is currently underway for the full aircraft.

The IAF has signed a ₹6,828 crore contract with HAL for the supply of 70 HTT-40 aircraft, along with spares and The HTT-40 is being priced by HAL training infrastructure. Induction into service is to commence on September

SRK fever grips country as Jawan

gets the biggest Bollywood opening

Earns record ₹129 cr worldwide and ₹75 cr in India on Day 1, surpasses Pathaan

The HTT-40, which has been indigenously designed by the Aircraft Research & Design Centre of HAL, is based on the training requirements of the IAF

2030. The HTT-40 will enhance the quality of training of ab initio pilots of the Indian armed forces.

The procurement will also include a full mission simulator for the (HTT-40), which will supplement the aerial training, allowing pilots to practice different profiles on ground, prior to the 15, 2025, and be completed by March 15, sorties," stated the MoD on Friday.
